

EXCEL™

ALL PURPOSE NON-IONIC
SPRAY ADJUVANT AND
COMPATIBILITY AGENT

GENERAL INFORMATION:

With chemical use on the rise along with chemical prices farmers and other users of spray material are turning to wetting agents or wetter/stickers for mixing in their spray tanks.

EXCEL™ is a multi-purpose non-ionic adjuvant and compatibility agent designed to increase the performance and effectiveness of foliar fertilizer, herbicides, insecticides, or other chemicals. It delivers better wetting, sticking, and absorption of spray material.

When mixing **EXCEL™** with other spray material it will enhance compatibility, maintain a better solution, and reduce spray drift. **EXCEL™** will also increase the effectiveness of material it is used with.

EXCEL™ works to break down water size (DYNES) giving a more even spray layer and reducing water droplet formations on the leaf (This will reduce the chances of prism burn from water droplet formations on leaves)

DIRECTIONS FOR USE:

Apply in the early morning or late afternoon, never in the heat of the day

Following are suggested application rates for **EXCEL™**:

Foliar applications	1/4 pt per acre
Herbicides	1/4 pt per acre
Insecticides	1/4 pt per acre
Defoliant	1/4 pt per acre
Tank mixes	1 pint per 200 gal

EXCEL™ should be added to the spray tank last, after the water, to reduce foaming.

SUGGESTION: **EXCEL™** increases the effectiveness of herbicides and insecticides. We suggest you consider reducing the amounts of these materials to avoid excessive activity.

EXCEL™ liquid is available in 2.5 gal, 5 gal, 30 gal, 55 gal, 275 gal
