

Company Mission

United Agricultural Services of America Inc. is dedicated to the development and on going training of individual farmers and organizations, who are interested in finding and using alternate methods to improve cultivation and fertilization procedures. Our goal is to provide the tools and training to farmers so they can be less dependant on chemical fertilizers, while harvesting the same if not better produce. We can show the modern day farmer heading into the 21st Century that his land can become sustainable to be ecologically and biologically sound, once all the imbalances and toxicities are corrected in the soil. This will promote the health of the environment.

United Agricultural Services researches, manufactures and markets one of the largest lines of high quality Biological, Organic/Natural fertilizers, Foliar Nutrients and natural biodegradable soil conditioners. These products include plant nutrients, liquid soil modifiers, Humic acids, seaweed, fish emulsion, nitrogen fixing bacteria, enzymes, beneficial fungi (to control nematodes), non toxic insect controls and many other environmentally safe products.

We are dedicated to providing to our customers the means to building a stronger foundation for their crops at lower end costs. We want our customers to obtain the very best from the investment placed in their agro business, whether its in production, distribution and/or resale's.

Advanced and specialized in our field, our company has perfected and developed products and crop programs to help our customers reach their objectives, to grow high quality crops with healthy profit returns.

Our guarantee is to provide high quality products at a competitive price and to develop new products for our customers along with providing sound growing advise.

Product Development

Our company provides programs of soil rejuvenation that emphasizes user training in proper application of materials, equipment, and optimum timing. We will also custom tailor programs to suit individual needs and convenience.

To revitalize energy-depleted soil, we have perfected the technology to:

1. Detoxify the soil by leaching out harmful chemical residues.
2. Loosen hard soil for moisture and air circulation. Restore the transpiration cycle.
3. Increase the organic matter content that in turn raises the moisture retention capability.
4. Infuse the soil with fresh bacteria and fungi to restore proper cation activity.
5. Restore and supply the proper levels of necessary micro and macronutrients.

Our company continues an on going teaching process to understand the importance of and to increase the microbial life sources in the soil. This is critical to growing a healthy crop, helping give more color, taste, brightness, shelf life, organic matter, root structure and size. This will also reduce insect damage, fungus and premature death from weakened plants.

United Agricultural Services markets its products internationally and domestically in the United States of America. In our international division we have opened doors to sales in the Asian, Japanese and Middle East Countries. We are also distributing and working with companies in New Zealand, Australia, Europe, Canada and Central and South America. Many of these countries have on going tests (as an importing requirement) and are purchasing United Agricultural Services' products. We have international distribution points in the U.A.E. Japan and in ASIA

MILESTONES / ACHIEVEMENTS / PERSEVERANCE

UAS of America Inc. has grown over the years larger and more advanced than many of its competitors in the same industry and of the same age. We have it many milestones but some Key milestones we consider to have accelerated us into what we are today are listed below.

1994 UAS OPENS FIRST OFFICE in FLORIDA. Constructs a 10,000ft² WAREHOUSE with specialized manufacturing equipment containing the latest modern day manufacturing technologies. Develops three Labs.

1995 Registers Micro-Boost and Super Hume with OCIA and then OMRI and developed several other products that

are recognized by most organic agencies as organic, thus launching UAS of America into a new growing market of supplying 100% certified organic farmers with the highest purest organically accepted products on the market today.

1996-97 UAS Formulates an arraying line of micronutrients, custom made to customers needs. Builds Asian Market Making CROPMASER a local recognized name.

1999 UAS of America developed a new line of potassium Phosphite products, made with 100% H₃PO₃. While installing specialized equipment in new warehouse facilities for specialized manufacturing of this line. UAS became one of America's first companies to place Minimum active ingredients of H₃PO₃ on their Label as a show of quality

2001 UAS acquires technology and equipment geared toward private label for individual distributors.

2002 UAS opens the USA West coast distributions center under private label in the TURF market with CYCLE WORKS Company. Also begins to enter into manufacturing products for the water treatment industry.

2003-2005 UAS searched for land to break ground for further expansion of its manufacturing facility. UAS is currently located on over 2 acres. With over three major expansions to its facility, UAS has found it necessary to expand into its next stage of production with larger warehouse facility (22,000 ft² min) on larger 15 acre. UAS's is located in Lake Panasofsee in Sumpter Florida. It is 1 hour from the Hudson offices current location and will house a new larger production facility modernized with the latest manufacturing equipment.

2007 Uas began to increase its toll blending and custom blending business. We saw an opportunity to give a service to companies that needed experience blenders, packagers with the right equipment and the care and dedication that we can provide. UAS will now and in the future expand more on this as it developed it subsidiary company.

Present and future

2007-2012

UAS continues to offer Custom Blends (Toll Manufacturing) for existing companies and also custom package services for small entrepreneurs and large companies. These services are offered so the third party can concentrate on marketing with out having to worry about all the regulations and investment of offering specialized items

While offering this service, UAS will expand further on it 15 acres of industrial zoned land to include Water soluble and Granular plant nutritional food. Never before will there be a company like UAS to give the farmer from A-Z for all its growing needs in quality and at a price that makes a farmer profitable

What does the future hold for UAS and its distributors?

You can be sure it will involve development of products directed to environmental issues and crop disease control as greater demands are being placed on our industry to produce crop products that address those issues. Also as always, **UAS of America Inc.** is committed to the on going development of additional environmentally sustainable products.
